

ENMA 278: Lean Manufacturing

Personal Project – Flow

In our lectures on flow, we discussed eight ways to achieve flow:

1. Establish stage-graduation (stage exit) criteria
2. Apply *andon*
3. Utilize self-adapted tools
4. Reduce part count
5. Increase part simplicity
6. Incorporate part alignment features
7. Eliminate verification
8. Optimize assembly transport

For your personal project, identify at least (4) specific opportunities to improve flow related to these eight approaches.
