

ENMA 278: Lean Manufacturing

Team Project – Recommendations

Having completed your to-be value stream map, you are now ready to document specific recommendations for making your process lean. Your recommendations will be composed of two sections:

1. Detailed recommendations on the PRIMARY WIP/waste/flow opportunities cited on your to-be value map. Here, you will propose specific actions that could be taken to improve the process.
2. Brief summary of other opportunities for improvement noted throughout the course of your study. Here, you will not recommend specific improvements, you will just cite areas that could be improved.

You will place your deliverable and any other relevant documents (e.g., Visio files, etc.) in your team project Google Docs folder.
