

# ENMA 6050: Root Cause Analysis

---

Based on your process FMEA deliverable, you now know which activity in your process poses the top priority problem. Here, you conduct a root cause analysis on just that activity to expand your understanding of the issues related to the activity.

You will conduct your root cause analysis for your top-rated process activity using either the action/condition diagram or a fault tree diagram. Prepare your diagram using Visio and print it out as a 30" x 40" poster. Attach your diagram to your final report Word document as Appendix 5. Also, prepare a text description of your diagram to include in your final report.
